

Baby System

Washable Diaper  
FILTRAS GIÒ'  
"all-in-one"

## HOW TO USE

Wash before use. The washable Diaper FILTRAS reach maximum absorption capacity after several washes.

When used in contact with the skin, it is recommended to use a disposable wet wipe to remove any solids to avoid spoiling the nappy before placing it in the washing machine. Excessive use of creams and powders may reduce the absorption capacity of the fabric.

Each washable nappy features an absorbent panel but it is also possible to add an extra absorbent panel to guarantee maximum absorption capacity. Ensure that the velcro is fastened securely to avoid leakage at the sides. The absorbent panel is laid flat for girls and folded for boys. For newborn boys it may not be necessary to fold the panel as at this age a high absorption capacity is not required.

All of the velcro straps must be fastened before placing in the washing machine or dryer to avoid snagging.

Wash dirty washable Diaper FILTRAS within three days to avoid the formation of mould or unpleasant odors, or preferably soak in a basin with water and washing detergent (biodegradable recommended) until washing.

Wash on a 60°C programme for best value and a perfect wash. GIÒ washable Diaper FILTRAS also tolerate higher temperatures.

Do not use whiteners, fabric softeners (white wine vinegar is a good alternative) or detergents with surfactants, petrochemicals and synthetic fragrances as these may irritate the skin.

Never expose to direct heat sources (e.g. radiators), do not squeeze, and avoid ironing at high temperatures to prevent damage to the waterproofing.
